Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-8,10,11 are rejected under 35 U.S.C. 102(e) as being anticipated by Wada et al (6,474,824)
3. The recitation in the preambles of claims 1 and 10 have not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).
4. Sugiura discloses a prism shape for reflecting the propagating light within the light guide plate and emitting the propagating light to the emitting face side is formed on the emitting face of the light guide plate (22,F, Fig 1); the prism shape is constructed by

plural projection stripes formed on the emitting face and a slanting face is formed on an advancing direction side of the propagating light of the projecting stripe (figs 1-3); the angle formed between an advancing direction of the propagating light incident to the slanting face portion and an advancing direction of the propagating portion is an obtuse angle; the angle formed between the advancing portion direction of the propagating light incident to the slanting face portion and the advancing direction of the reflected light of the propagating light is set to 90 deg or more and 150 deg or less (fig1); the inner face of the slanting face portion is formed so as to be directed to an outer face side of the emitting face; wherein each of the projecting stripes is approximately formed in a trapezoidal shape seen in section in which a flat portion is formed in a top portion of the projecting stripe (fig 1), the inclination angle of the slanting face portion is set to 40 degrees or more and 60 degrees or less; plural projecting stripes for reflecting the propagation light within a light guide plate and emitting the propagating light to the emitting face side are formed on the emitting face and each of the projecting stripes has a slanting face portion on a propagating light advancing direction side (22,22a,22b); the device is formed on a rear face of a liquid crystal panel.

Allowable Subject Matter

5. Claim 9 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
